

# 4 WAYS BUSINESS INTELLIGENCE

## Can Improve Your Restaurant Operation

01

### INTERPRET KEY DATA FASTER

With advanced visualizations, you can choose between multiple different ways to display detailed data, making it easier to use and understand. BI tools can help you create different visuals of your data.

02

### SINGLE SOURCE OF TRUTH

You can compare sales metrics and labor metrics all at the same time. The ability to do this enables you to see how one set of data impacts another set of data.

04

### IMPROVE EFFICIENCY

Before intuitive software developments, teams of business analysts spent countless hours creating, processing, and formatting dozens of spreadsheets, every month, hoping to arrive at some usable information. Today, BI tools can complete the same work in moments, and produce a more attractive, compelling report.

03

### CRITICAL INFORMATION ON DEMAND

Worthy business intelligence tools can automatically distribute reports to you and your team. Users can access reports on computers, laptops, tablets, or smartphones, regardless of their operating system. The right information to the right people at the right time.
